PRODUCT

SP-1™

CLASSIFICATION

ELECTROPNEUMATIC TACTICAL PAINTBALL MARKER

DESCRIPTION

A FRESH TAKE ON TACTICAL With its military styling and ultra-rugged lightweight construction, the SP-1™ is built for speed and made to last. With mil-spec accessory rails at every angle and integrated mount points for a stock, the SP-1™ is ready for a limitless variety of accessories. The SP-1™ is also equipped with an integrated tactical flashlight mount right below the barrel, which accepts inexpensive focused beam flashlights at a fraction of the cost of expensive tactical flashlights. Low-pressure electropneumatic operation replaces the outdated spring and hammer designs that power competing tactical markers and allows the SP-1™ to deliver a fast, accurate and quiet hailstorm of paint.
